

Final Project for CS4361.001 Computer Graphics

Submission

eLearning Submission Due Time: **11:59pm, May 3rd, 2026**. Late submission will be accepted with a penalty of deduction in grades by 10% per day.

A final project report (see the description as follows) should be submitted together with the source code, and any assets that are needed. Please also include a detailed instruction about how to compile and run your project.

Project Report

It is very important that you clearly and specifically state in your project report what you have accomplished by the end of the semester. Be concise. I do not want to see code listings (except maybe pseudo-codes of algorithms to demonstrate a point). Your project report should be well organized and contain the following information, though the format and organization is totally up to you:

- Your Team Member's *Name* and project *Title*
- *Problem summary* – Briefly summarize the problem you are dealing with and why it is important. This is likely to be a modification of your proposal.
- *Description of work* – Describe the work you performed. Include any major “dead end” paths of research and why they failed, and any major challenges you encountered.
- *Results* – Describe exactly what was achieved. State exactly what you have accomplished, giving concrete information (e.g. by charts, pictures, screenshots, videos, etc.) about what you have done, including some screenshots or videos of the results in your program. If you have a video of your results, please place the video on Youtube and include the video link in the report.
- *Analysis of work* – You should analyze the work done from the standpoint of how successful you were on the project. You should include the following information: How well did you meet the original goals you set out? If you did not meet these goals, why not?

Presentation and Demo

Each team will have 5—10 minutes to present and demo their final project results.

- 4pm—5:15pm, May 4th, at GR 4.428
- 4pm—5:15pm, May 6th, at GR 4.428
- 2pm—4:45pm, May 15th, at GR 4.428
